```
/superpowers:using-superpowers review the plan in @docs/plans/2026-04-03-firestore-to-postgresql-migration-design-v2.md

● Skill(sc-sdlc:review-plan)
  └ Successfully loaded skill

  Read 1 file (ctrl+o to expand)

● I've read the 761-line plan. Now launching verification agents in parallel.

● 5 agents finished (ctrl+o to expand)
   ├ Codebase claims verifier · 0 tool uses
   │ └ Done
   ├ External library verifier · 0 tool uses
   │ └ Done
   ├ Architecture review · 0 tool uses
   │ └ Done
   ├ Bug pattern hunter · 0 tool uses
   │ └ Done
   └ DB/performance review · 0 tool uses
     └ Done

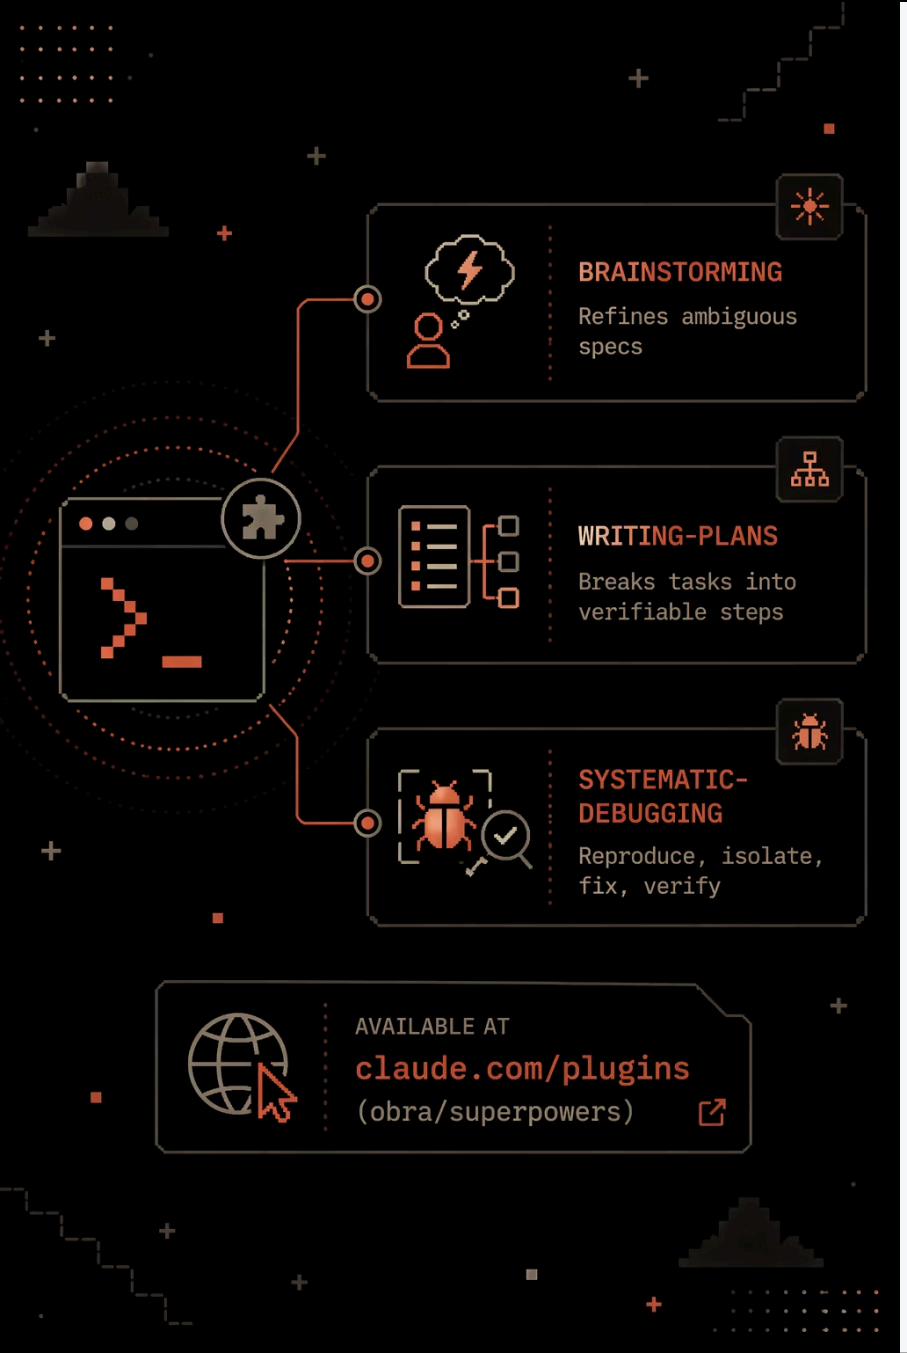

● Plan Review: 2026-04-03-firestore-to-postgresql-migration-design-v2.md

  All 5 verification agents returned findings. Consolidated and deduplicated below.

  Issues Found: 26
```

#	Severity	Issue	Action
1	CRITICAL	`orphanRemoval=true` does NOT fire when parent is soft-deleted — `asi_charges` cleanup claim is wrong	FIX
2	CRITICAL	Soft-deleted rows block lazy-migration resurrection via unique constraints	NEEDS DECISION
3	CRITICAL	ASI API call + DB insert for CHARGE_UPDATED decomposition has no atomicity story	NEEDS DECISION
4	HIGH	`asi_charges` labeled "no migration — new concept" but mapping tables + transformer explicitly migrate charges from Firestore	FIX
5	HIGH	`load_leg_vehicles` unique key `(load_leg_id, shipping_item_id, vehicle_id)` missing `company_id` — no multi-tenant guarantee documented	NEEDS DECISION
6	HIGH	`check_in_events` partial unmatched index `(company_id, recorded_at)` missing `vin` — DISTINCT query will heap-fetch	FIX

TDD - Red-Green-Refactor

Red

Failing test first

Green

Minimal code

Refactor

Clean code, tests stay green

Beads

Persistent memory across sessions

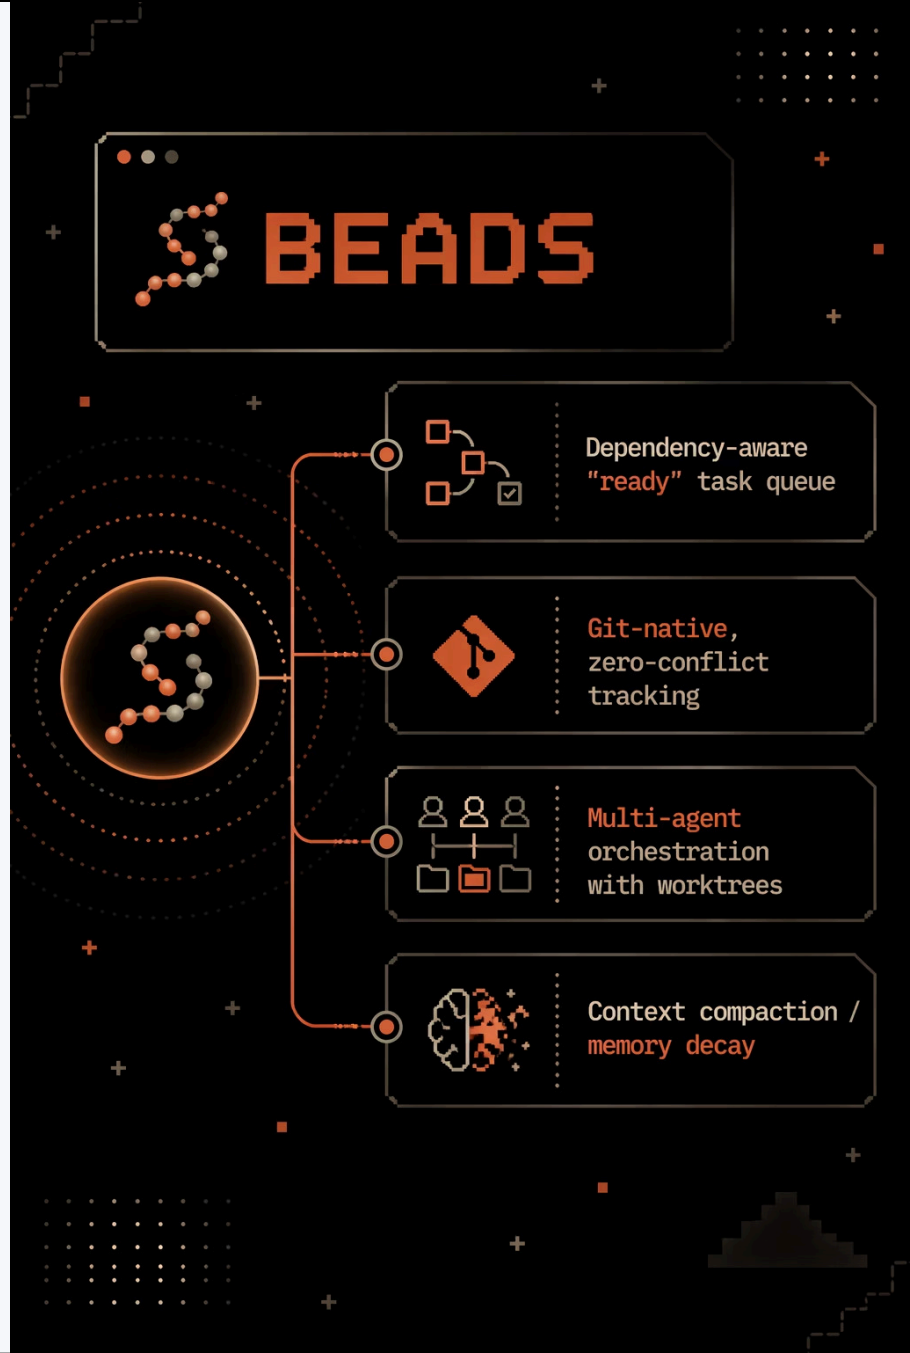

Dependency-aware "ready" task queue

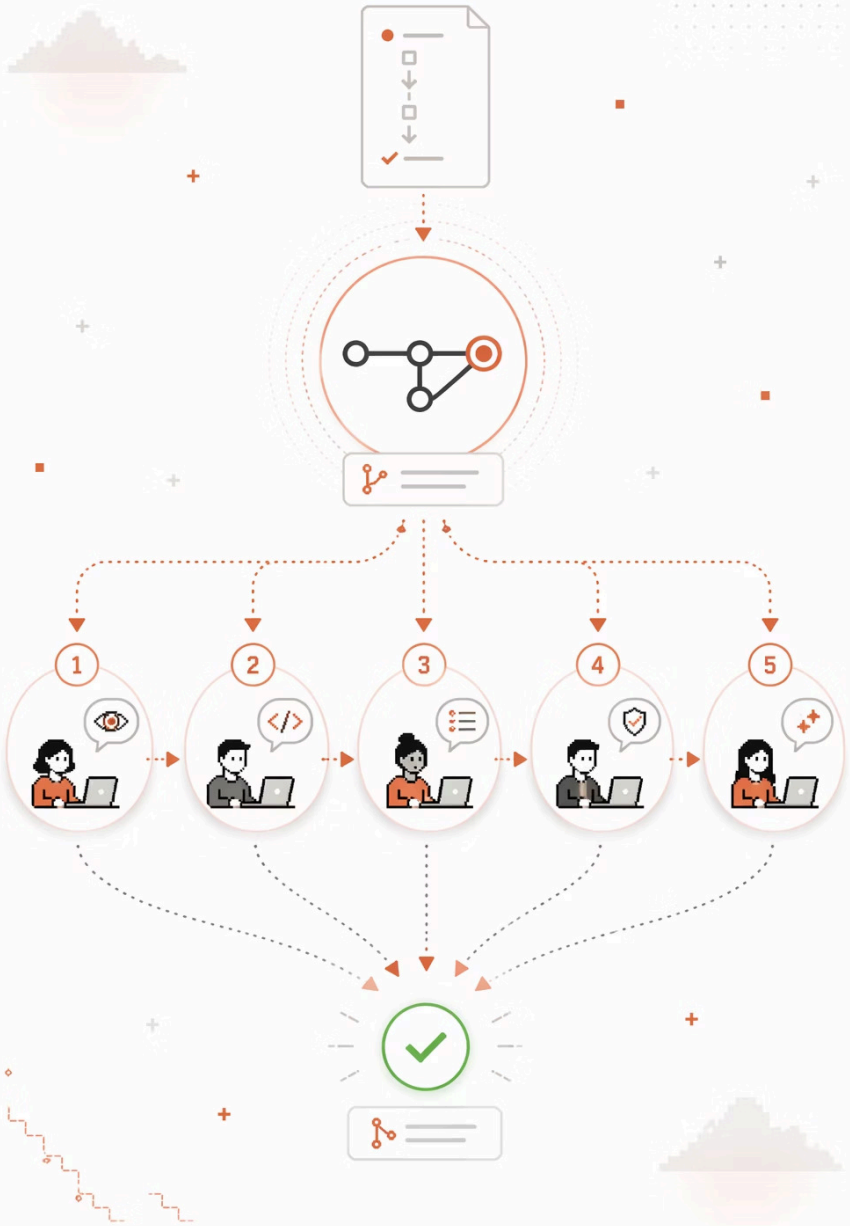

Git-native, zero-conflict tracking

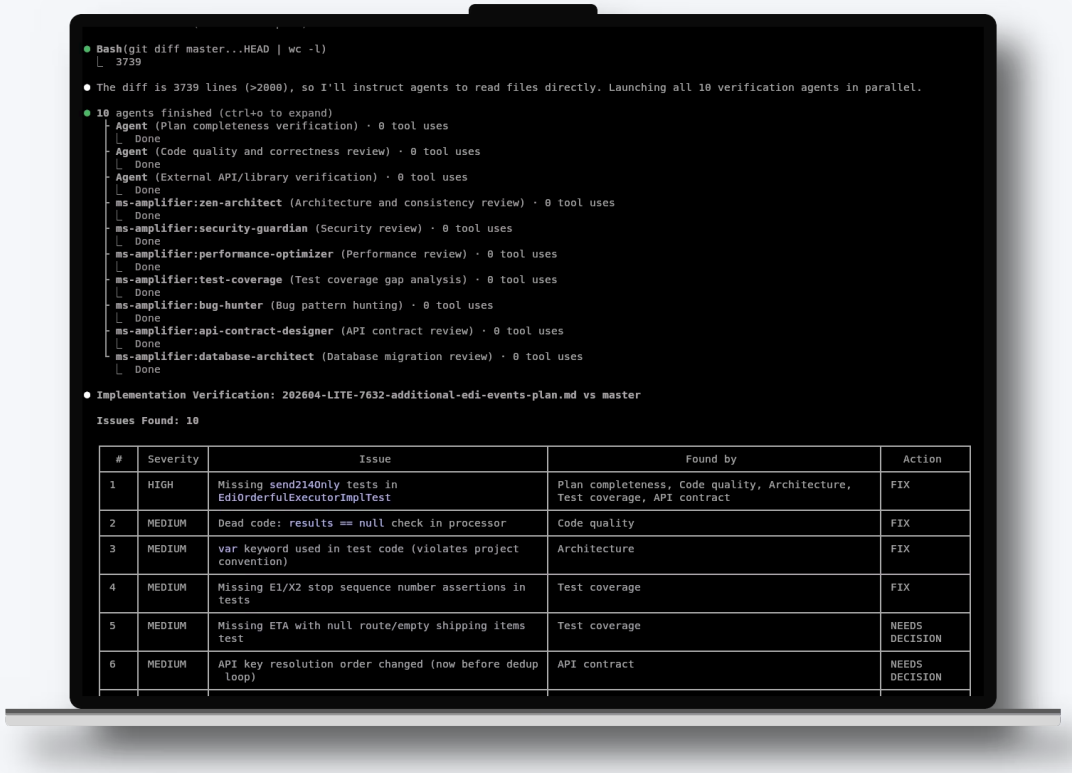

Multi-agent orchestration with worktrees

Context compaction / memory decay

gastownhall/beads

● **Bash**(git diff master...HEAD | wc -l)
  └ 3739

● The diff is 3739 lines (>2000), so I'll instruct agents to read files directly. Launching all 10 verification agents in parallel.

● **10** agents finished (ctrl+o to expand)
  ├ **Agent** (Plan completeness verification) · 0 tool uses
  │ └ Done
  ├ **Agent** (Code quality and correctness review) · 0 tool uses
  │ └ Done
  ├ **Agent** (External API/library verification) · 0 tool uses
  │ └ Done
  ├ **ms-amplifier:zen-architect** (Architecture and consistency review) · 0 tool uses
  │ └ Done
  ├ **ms-amplifier:security-guardian** (Security review) · 0 tool uses
  │ └ Done
  ├ **ms-amplifier:performance-optimizer** (Performance review) · 0 tool uses
  │ └ Done
  ├ **ms-amplifier:test-coverage** (Test coverage gap analysis) · 0 tool uses
  │ └ Done
  ├ **ms-amplifier:bug-hunter** (Bug pattern hunting) · 0 tool uses
  │ └ Done
  ├ **ms-amplifier:api-contract-designer** (API contract review) · 0 tool uses
  │ └ Done
  └ **ms-amplifier:database-architect** (Database migration review) · 0 tool uses
    └ Done

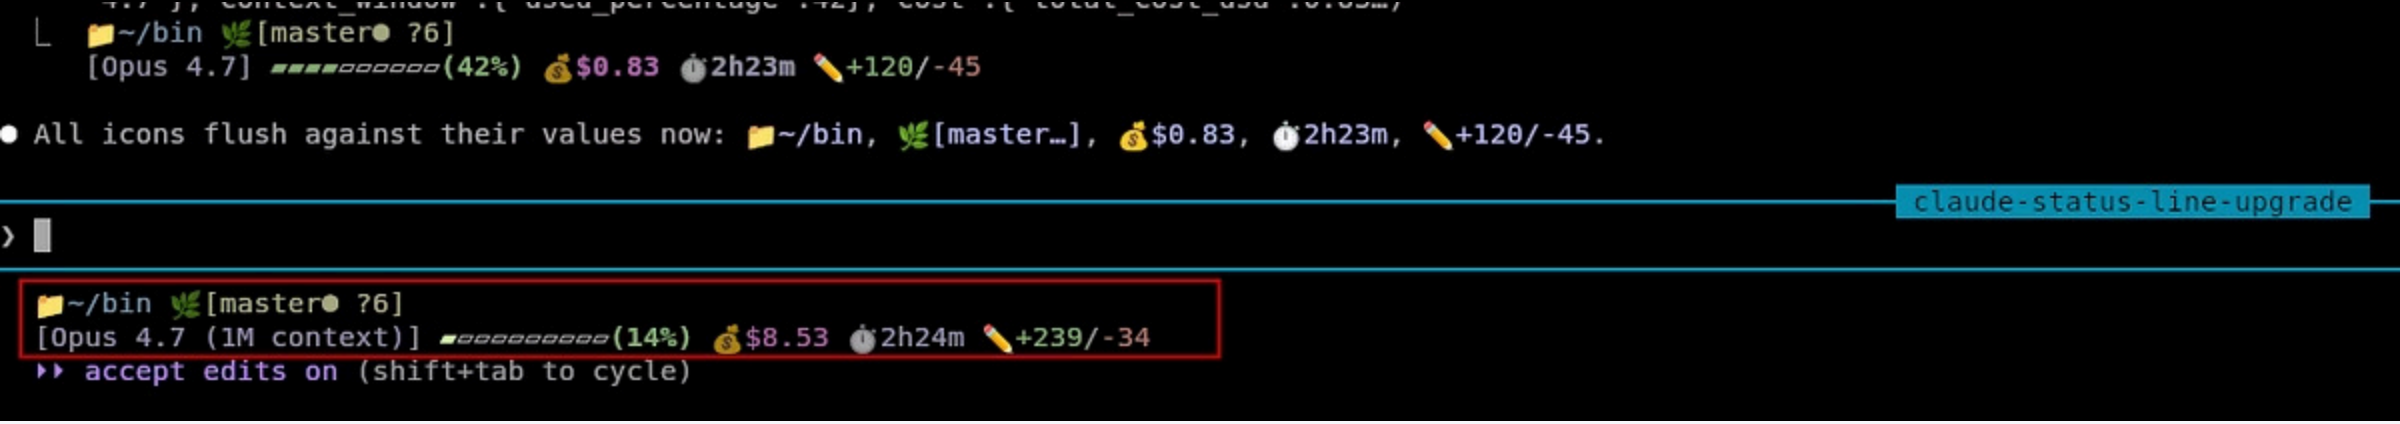

● **Implementation Verification: 202604-LITE-7632-additional-edi-events-plan.md vs master**

Issues Found: 10

#	Severity	Issue	Found by	Action
1	HIGH	Missing `send2140nly` tests in `EdiOrderfulExecutorImplTest`	Plan completeness, Code quality, Architecture, Test coverage, API contract	FIX
2	MEDIUM	Dead code: `results == null` check in processor	Code quality	FIX
3	MEDIUM	`var` keyword used in test code (violates project convention)	Architecture	FIX
4	MEDIUM	Missing E1/X2 stop sequence number assertions in tests	Test coverage	FIX
5	MEDIUM	Missing ETA with null route/empty shipping items test	Test coverage	NEEDS DECISION
6	MEDIUM	API key resolution order changed (now before dedup loop)	API contract	NEEDS DECISION
